

MyPwdTool Launches a “Zero-Identity” Password Manager With No Account and No Cloud Vault

PARIS, FRANCE | SEPTEMBER 2026

Today, most password managers require users to create yet another account before they can start protecting their digital lives. MyPwdTool is taking a different approach.

Now available on macOS, iOS, Windows and Android, MyPwdTool is an end-to-end encrypted password manager that requires no account, no email address and no central cloud vault. Users can store passwords, payment cards, two-factor authentication codes and other sensitive information in an encrypted vault that remains on their own devices.

While “zero-knowledge” encryption has become standard across the password manager industry, MyPwdTool introduces what it calls a Zero-Identity model: users can use the product without creating an account, registering an email address or maintaining a user profile. The synchronisation service itself does not maintain a user account database.

“Most password managers say: trust us. MyPwdTool doesn’t have to ask.”

Unlike cloud-centric password managers, MyPwdTool stores each encrypted vault exclusively on the user’s own devices. For users who choose to enable multi-device synchronisation, encrypted data is exchanged between devices through an open-source relay that cannot access vault contents and does not host user vaults.

Core features

- End-to-end AES-256-GCM encryption, with cryptographic operations performed on-device
- Password, payment card and secure note storage
- Built-in TOTP two-factor authentication codes
- Password health auditing and breach checking
- Browser autofill support for Chrome, Edge and Safari
- Multiple vaults, encrypted backup and export capabilities
- Full offline operation on every platform

The application is free to use. Multi-device synchronisation is available as an optional paid add-on.

Developed independently in France, MyPwdTool is self-funded and designed for users who want a password manager that does not depend on a user account or centralised cloud storage.

Availability

Platform	Availability
macOS	Mac App Store
iOS	App Store
Windows	Microsoft Store and direct download
Android	Google Play
